

Environmental policy

We determine internal and external issues and consider the needs and expectations of our interested parties.

Environmental policy is included in our leadership guiding principles. By creating and maintaining a working environment which fosters health and performance alike and by actually putting environmental protection into practice, we contribute to the continuity and success of our company.

Efficient environmental management

We live an environmental management system world-wide, which we improve continually. We develop anticipatory concepts and implement these together with our contractual partners. We verify implementation of the requirements and performance of our management system on a regular basis and in all areas.

Acting reliably

We undertake to comply with all laws and regulations related to environmental protection. We act responsibly based on our own regulations which often go beyond legal provisions. We plan, buy, operate and service machinery and facilities in such a way as to exclude potential dangers, to minimize risks and to avoid operating malfunctions. We orientate ourselves on the state of the art.

Small environmental footprint and environmentally friendly products

In all activities, we aim at pro-actively avoiding detrimental effects on the environment. We use raw materials and energy as economically as possible. We attempt to generate as little waste, wastewater, noise and as few other emissions as possible. We manufacture environmentally friendly products in consideration of their complete life cycle.

Responsible employees

Via regular information, training and on-going training, we enhance the competence and awareness of our employees as regards working safely and environmental protection in all areas of our company.

Preventive measures

We protect our environment against damage by implementing comprehensive preventive measures.

Open dialogue

We maintain an intensive and trusting dialogue with interested parties. We provide information on our environmental protection measures and on the environmental impacts emanating from our sites.

01.07.2022, Holger Ketterer
COO SGB – SMIT GmbH
